## LASER VAGINAL REJUVENATION

LVR is the modification of a gynaecological surgical procedure used for the treatment of pelvic organ prolapse. Our laser techniques result in gentle precision procedures with controlled accuracy that result in relatively bloodless surgery. For most patients, these techniques result in rapid healing and resumption of daily activities in a short period of time.

LVR will effectively enhance vaginal muscle tone, strength, and control. It will also effectively decrease the internal and external vaginal diameters (tighten the vagina) as well as build up and strengthen the perineal body.

In vaginal relaxation, the muscles are relaxed and have poor tone, strength, and control. The internal and external diameters increase. The muscles of the perineum are weak and poorly supported. Under these circumstances, the vagina is no longer at its optimum physiological state. As a result, the sensual side of sexual gratification is diminished.

LVR procedures are designed to enhance sexual function for women who, for whatever reason, lack an overall optimum architectural integrity of the vagina.

## DESIGNER LASER VAGINOPLASTY

Designer Laser Vaginoplasty® (DLV®) is an aesthetic surgical enhancement of the vaginal area, including the vulvar structures, labia minora, labia majora, mons pubis, perineum, introitus, and hymen. These procedures give the patient the ability to have the surgeon aesthetically design procedures in line with the specifications and desires of the patient.

Designer Laser Vaginoplasty can be described as several procedures that are outlined below.

Laser Reduction Labioplasty can sculpture the elongated or unequal labial minora according to one's aesthetic desire. Most women do not want the small inner lips to project beyond the large outer lips. Labioplasty techniques can also reconstruct conditions that are due to the aging process, childbirth trauma, or injury.

Laser Perineoplasty may rejuvenate relaxed or an aging perineum. It can also enhance the sagging labia majora and labia minora. Overall, the procedure seeks to provide a youthful and aesthetically appealing vulva.

Augmentation Labioplasty can provide aesthetically enhanced and youthful labia majora by autologous fat transplant.

Vulvar Lipoplasty can remove unwanted fat of the mons pubis and upper parts of the labia majora. Liposculpturing may alleviate unsightly fatty bulges in this area and produce an aesthetically pleasing contour.

LVR and DLV can be performed in combination. It is important that you work with a qualified surgeon with experience in this area, your body and health are the most important aspects of making the decision to undergo any type of procedure.

At the Women Clinic, these procedures are performed by qualified surgeons certified by the Laser Vaginal Rejuvenation-Institute of America.
