

Lama Jurdy, MD

Dr Jurdy is an Ophthalmologist (American University of Beirut graduate) sub-specialized in Oculoplastic Surgery (University of Amsterdam graduate). Oculoplastic surgery includes surgery of the eyelid: cosmetic and functional; lacrimal system (tearing problems); and orbital surgery (the tissue and bone around the eye).

At the Academic Medical Center-University of Amsterdam (AMC-UvA), Dr Jurdy received training in the most recent advances in the field including endoscopic techniques. She is a published author in peer reviewed research journals and shares her work through lectures presented to local as well as international ophthalmologists - such as at the European Society of Ophthalmic Plastic and Reconstructive Surgery (ESOPRS) meetings. In her practice as well as lectures, she emphasizes that a good approach includes both cosmetic and functional surgery as required to the best benefit of the patient. This approach helps maintain a healthy perspective when helping patients to see as well as look better.
